

# V-Stack

---

## 1.2

### New Features

- OSX version available
- Ability to create master keyboard layers and splits by defining Lo/Hi keys and MIDI channel for each VSTi (see manual p.62)
- Each VSTi can be transposed by octaves and semitones (see manual p.62)
- Ability to set the tempo and signature for plugins and instruments (see manual p.54)
- New transport panel with general transport functions for VST System Link and Rewire (manual p.54)
- Mouse mode can now be switched between linear and circular (see manual p.147)
- Rewire2 support

### Fixes

- When removing a VSTi from the instrument rack the MIDI settings (input-port+channel, zone range, transpose) are stored now
